Glasilo Prirodoslovnega muzeja Slovenije. Izdaja Prirodoslovni muzej Slovenije, sofinancirali so: Republiški sekretariat za raziskovalno dejavnost in tehnologijo, Republiški sekretariat za kulturo in Znanstvenoraziskovalni center SAZU. Uredniški odbor: Jože BOLE, Ernest FANINGER, Janez GREGORI (urednik), Boris KRYŠTUFEK, Ignac SIVEC, Kazimir TARMAN in Tone WRABER. Lektorja: Cvetana TAVZES (za slovenščino) in Helena SMOLEJ (za angleščino). Naslov uredništva in uprave: Prirodoslovni muzej Slovenije, 61000 Ljubljana, Prešernova 20. Izideta najmanj dve številki letno, naklada 600 izvodov. Tekoči račun pri LB št. 50 100-603-40115. Tisk tiskarna Tone Tomšič, Ljubljana.

SCOPOLIA

Journal of the Museum of Natural History of Slovenia, Ljubljana, Edited by the Museum of Natural History of Slovenia, subsidized by Republican Secretariate for Research and Technology, Republican Secretariate for Culture and Centre of Scientific Research of the SASA. Editorial Staff: Jože BOLE, Ernest FANINGER, Janez GREGORI (Editor), Boris KRYŠTUFEK, Ignac SIVEC, Kazimir TARMAN and Tone WRABER. Readers: Cvetana TAVZES (for Slovene) and Helena SMOLEJ (for English). Address of the Editorial Office and Administration: Prirodoslovni muzej Slovenije, YU 61000 Ljubljana, Prešernova 20. The Journal appears at least twice a year, 600 copies per issue. Current account at LB No 50100-603-40115. Printed by tiskarna Tone Tomšič, Ljubljana.

Aquatic Empididae Fauna (Diptera) in Bosnia and Herzegovina

I wish to dedicate the present paper to the suffering peoples of Bosnia and Herzegovina, trapped in the tragic circumstances of war.

ABSTRACT – Thirty-five aquatic dance flies species (Clinocerinae, Hemerodromiinae) are recorded in Bosnia and Herzegovina (BIH). Twelve species are new to the fauna of BIH: *Clinocera (Clinocera) schremmeri* (Vaillant, 1964), *Clinocera (Hydrodromia) wesmaeli* (Macquart, 1835), *Clinocera (Kowarzia) plectrum* Mik, 1880, *C. (K.) tenella* (Wahlberg, 1844), *Wiedemannia (Wiedemannia) andreevi* Joost, 1982, *W. (W.) braueri* (Mik, 1880), *Wiedemannia (Chamaedipsia) aequilobata* Mandaron, 1964, *W. (Ch.) beckeri* (Mik, 1889), *W. (Ch.) thienemanni* Wagner, 1982, *Wiedemannia (Philolutra) fallaciosa* (Loew, 1873), *W. (Ph.) wachtl* (Mik, 1880), and *Wiedemannia (Eucelidia) zetterstedti* (Fallen, 1826). A new clinocerid fly, *Wiedemannia (Philolutra) kacanskae* sp.n. is described and illustrated. The species distribution is shown in the 50 km UTM grid of Bosnia and Herzegovina.

IZVLEČEK – FAVNA VODNIH MUH EMPIDIDAE (DIPTERA) V BOSNI IN HERCEGOVINI – V Bosni in Hercegovini (BIH) je ugotovljenih petintrideset vrst vodnih muh poplesovalk (Clinocerinae, Hemerodromiinae). Za favno BIH je novih dvanaest vrst: *Clinocera (Clinocera) schremmeri* (Vaillant, 1964), *Clinocera (Hydrodromia) wesmaeli* (Macquart, 1835), *Clinocera (Kowarzia) plectrum* Mik, 1880, *C. (K.) tenella* (Wahlberg, 1844), *Wiedemannia (Wiedemannia) andreevi* Joost, 1982, *W. (W.) braueri* (Mik, 1880), *Wiedemannia (Chamaedipsia) aequilobata* Mandaron, 1964, *W. (Ch.) beckeri* (Mik, 1889), *W. (Ch.) thienemanni* Wagner, 1982, *Wiedemannia (Philolutra) fallaciosa* (Loew, 1873), *W. (Ph.) wachtl* (Mik, 1880) in *Wiedemannia (Eucelidia) zetterstedti* (Fallen, 1826). Opisana in ilustrirana je nova vrsta vodnih muh poplesovalk *Wiedemannia (Philolutra) kacanskae* sp.n. Razširjenost vrst prikazujejo UTM mreže (50 × 50 km) Bosne in Hercegovine.

1. Introduction

In the past, the aquatic Empididae fauna of Bosnia and Herzegovina was studied fragmentarily by few entomologists. STROBL (1900) cited twelve species in BIH (see references). BEZZI (1904) described *Wiedemannia (Pseudowiedemannia) microstigma*, and ENGEL (1940) added *Wiedemannia (Wiedemannia) dinarica* to the list. In 1981, WAGNER described *Wiedemannia (Wiedemannia) balkanica*. HORVAT (1990) recorded six Hemero-dromiinae species in BIH (see references).

On the basis of several collecting trips to BIH (October 1986, September 1987, October 1988, May 1990, and October 1990), organized by the Slovene Museum of Natural History (leg. Bogdan Horvat and Dr. Ignac Sivec), a more detailed overview of the BIH aquatic Empididae fauna is presented in this paper. Older data from the literature are also included in the text and distribution maps. STROBL (1900) also added *Chelifera monostigma* (Meigen, 1822) to the fauna of BIH, proceeding from the determination of a single female at his disposal; this species also lives in Northern and Western Europe, so it is not included in the present study.

2. Material and Methods

A total of 1605 aquatic empidids (768 ♂♂, 837 ♀♀) were examined. The specimens, preserved in alcohol, were dissected. The abdomens were boiled in hot KOH and washed in acetic acid. Then they were transferred into clove oil. The genitalia and their structures were studied in dorsal and lateral views in glycerin. The abdomens were stored in plastic microvials, joined together with labels and the rest of the animals, and preserved in 75 % alcohol. The material is deposited in the scientific collection of the Slovene Museum of Natural History in Ljubljana.

All recent faunal data on the aquatic Empididae species in Bosnia and Herzegovina are presented according to the international UTM (Universal Transverse Mercator) grid (SIVEC 1980) and marked with black circles. The records from the literature are marked with black quadrats.

3. List of Localities

The localities in Bosnia and Herzegovina are designated with 50 and 10 km UTM squares, their positions are shown in Fig. 1. The altitudes are added to the localities that we visited in October 1990.

4. Faunistics

4.1. Subfamily Clinocerinae

Clinocera (Clinocera) nigra Meigen, 1804

Material examined: XK4: Skender Vakuf, 820 m, 19.X.1990, 1 ♂; YK2: 3 km N Šiprage, Kotor Varoš, 540 m, 19.X.1990, 2 ♂♂, 3 ♀♀; CQ2: Krabašnica, Konjuh Mts., 540 m, 13.X.1990, 1 ♂; CQ2: 16 km N Kladanj, Konjuh Mts., 890 m, 14.X.1990, 1 ♂; CQ2: 19 km N Kladanj, Konjuh Mts., 890 m, 14.X.1990, 1 ♂; CP1: Boganovići, Kladanj, 570 m, 15.X.1990, 1 ♂;

Remarks: *C. (C.) nigra* is a wide-spread species in Europe (CHVÁLA & WAGNER 1989). Its distribution in BIH is shown in Fig. 2.

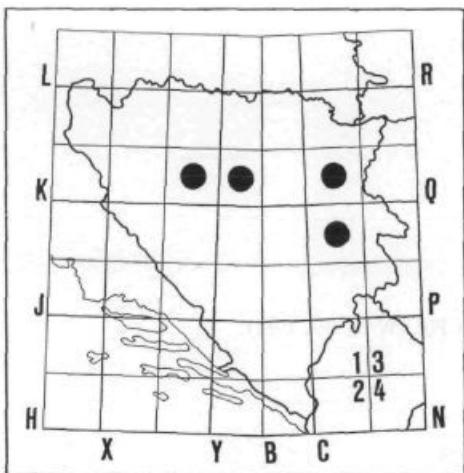

Fig. 2. *Clinocera (Clinocera) nigra* Meigen, 1804 in BIH: 50 km UTM grid.

SI. 2. *Clinocera (Clinocera) nigra* Meigen, 1804 v BIH: UTM mreža 50 × 50 km.

Clinocera (Clinocera) schremmeri (Vaillant, 1964)

Material examined: CQ2: 16 km N Kladanj, Konjuh Mts., 890 m, 14.X.1990, 1 ♂, 1 ♀; YJ1: Ragale, Fojnica, 790 m, 17.X.1990, 5 ♂♂, 1 ♀; YJ1: 5 km SW Fojnica, Vranica Mts., 1400 m, 17.X.1990, 26 ♂♂, 23 ♀♀; YJ1: Prokopsko Lake, Fojnica, Vranica Mts., 1680 m, 17.X.1990, 3 ♂♂, 8 ♀♀; YJ1: 8 km W Fojnica, Vranica Mts., 1410 m, 17.X.1990, 1 ♂; YJ1: 6 km W Fojnica, Vranica Mts., 1210 m, 17.X.1990, 2 ♂♂; YJ1: Fojnica, 700 m, 17.X.1990, 2 ♂♂; YJ1: 4 km S Dusina, Fojnica, Bitovnja Mts., 1000 m, 18.X.1990, 1 ♂;

Remarks: *C. (C.) schremmeri* is distributed in Northern and Central Europe (WAGNER pers. com.). It is new to the fauna of BIH (Fig. 3).

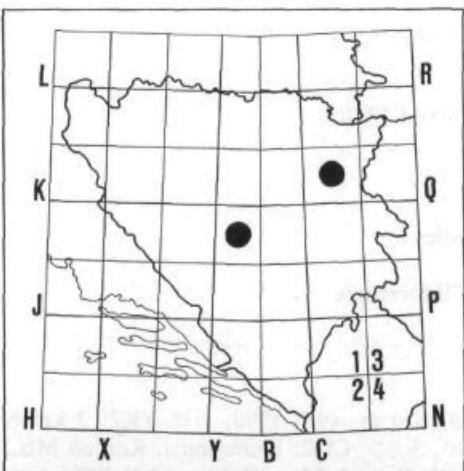

Fig. 3. *Clinocera (Clinocera) schremmeri* (Vaillant, 1964) in BIH: 50 km UTM grid.

SI. 3. *Clinocera (Clinocera) schremmeri* (Vaillant, 1964) v BIH: UTM mreža 50 × 50 km.

Clinocera (Hydrodromia) stagnalis (Haliday, 1833)

References: STROBL (1900); YJ2: Jablanica; YJ2: Mostar; WAGNER (pers. com.): XK4: r. Ugar, Vlatkovići, Ranča Mts., 500 m, 26.V.1990, 1 ♂; CP1: Olovo, 500 m,

14.VI.1991, 2 ♀♀;

New records: XJ1: Bosansko Grahovo, 1.V.1990, 5 ♂♂, 10 ♀♀; XJ4: r. Šujica, Lug, Duvno, 1.V.1990, 1 ♂;

Remarks: *C. (H.) stagnalis* is a widely distributed and common species in Europe (CHVÁLA & WAGNER 1989). Its distribution in BIH is shown in Fig. 4.

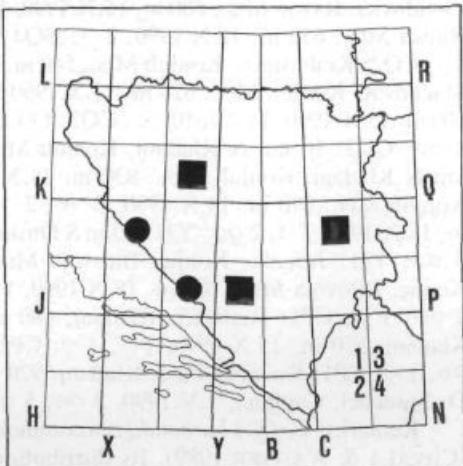

Fig. 4. *Clinocera (Hydrodromia) stagnalis* (Haliday, 1833) in BIH: 50 km UTM grid.

Remarks: *W. (Ph.) fallaciosa* is a widely distributed and common species in Europe (CHVÁLA & WAGNER 1989). It is new to the fauna of BIH (Fig. 20).

***Wiedemannia (Philolutra) kacanskae* sp.n. (Figs. 21-22)**

Material examined: Holotype ♂: BOSNIA AND HERZEGOVINA, BP3: Kreševo, Kiseljak, Volujak Mts., 690 m a.s.l., 17.X.1990, leg. Horvat and Sivec, (UTM: BP65). The holotype is preserved in 75 % alcohol and deposited in the Slovene Museum of Natural History, Ljubljana. Paratypes: 1 ♂, 3 ♀♀, BIH, YJ1: r. Željeznica, Dusina, Fojnica, 700 m a.s.l. (SW Ostra Glava, YJ 36 62), 28.V.1990, leg. Gerecke, (UTM: YJ36) (in coll. Dr. R. Wagner, Schlitz, Germany).

Description ♂: Head roundish, dark brown, proboscis short, eyes black. One pair of ocellar, 3 pairs of short interocular bristles and 5-7 pairs of postocular bristles. Thorax brown. Pronotum with one pair of weak pronotal bristles. Mesonotum with 5 pairs of dorsocentrals, between them 9-12 pairs of weak acrostichals in two rows. One pair of humeral, one pair of prealar, 2 pairs of intra-alar and one pair of postalar bristles present. Scutellum with 1 pair of apical bristles and some weak preapical hairs. Wings relatively short, light brown, with slightly elongate brownish stigma. Legs brown, long and slender. Abdomen brown.

Figs. 21-22. *Wiedemannia (Philolutra) kacanskae* sp.n.: 21 - male hypopygium, left lateral view, 22 - inner side of the right gonostyle and gonocoxite.

Sl. 21-22. *Wiedemannia (Philolutra) kacanskae* sp.n.: 21 - hipopigij samčka, levi stranski pogled, 22 - notranja stran desnega gonostila in gonokoksita.

Genitalia ♂, left lateral view (Fig. 21): hypandrium and aedeagus without specific features. Gonocoxite elongate rectangular, covered with numerous long bristles. Gonostyle basally rectangular, distally bipartite, covered with several weak hairs and bristles. Anterior part of the dististyle is a long prolongation, posterior part is rounded. Cerci with a few bristles, reduced in size, represented by small sclerites. Inner side of the right gonostyle and gonocoxite (Fig. 22): gonostyle covered with numerous strong short bristles. Gonocoxite with a short secondary prominence. Measurements ♂: body length 3.2 mm, wing length 3.5 mm.

Relation: the closest relative of the above species is *W. (Ph.) zwicki* Wagner, 1982, living in France and Italy. They differ in the shape of the gonostyle appendages. The presence of the new species in BIH is shown in Fig. 23.

Etymology: it is named after Dr. Dragica Kaćanski, Institute of Biology, University of Sarajevo.

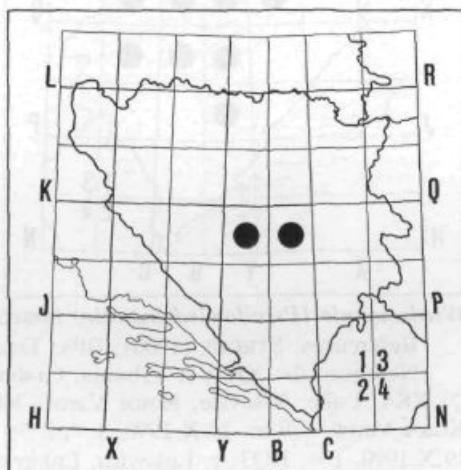

Fig. 23. *Wiedemannia (Philolutra) kacanskae* sp.n. in BIH: 50 km UTM grid.

5. Acknowledgements

I thank Dr. Dragica Kaćanski, Institute of Biology, University of Sarajevo, and Edhem Hasković, grad. biologist, for their kind cooperation during our collecting trips with my colleague Dr. I. Sivec in Bosnia and Herzegovina. The Institute of Biology, University of Sarajevo, offered us a grant for the trip in October 1990.

SUMMARY

The paper deals with 186 new records and 40 data from the literature (STROBL 1900, BEZZI 1904, ENGEL 1940, WAGNER 1981, 1985, pers. com., HORVAT 1990) on 35 aquatic Empididae (Diptera) species from Bosnia and Herzegovina. The empidids as studied belong to two subfamilies (Clinocerinae, Hemerodromiinae), and 8 genera: *Clinocera* (7 species), *Dolichocephala* (2), *Wiedemannia* (15), *Chelifera* (5), *Chelipoda* (2), *Heleodromia* (2), *Hemerodromia* (1), and *Phyllodromia* (1 species).

Twelve species are new to the aquatic Empididae fauna of Bosnia and Herzegovina: *Clinocera (Clinocera) schremmeri* (Vaillant, 1964), *Clinocera (Hydrodromia) wesmaeli* (Macquart, 1835), *Clinocera (Kowarzia) plectrum* Mik, 1880, *C. (K.) tenella* (Wahlberg, 1844), *Wiedemannia (Wiedemannia) andreevi* Joost, 1982, *W. (W.) braueri* (Mik, 1880),

Wiedemannia (Chamaedipsia) aequilobata Mandaron, 1964, *W. (Ch.) beckeri* (Mik, 1889), *W. (Ch.) thienemanni* Wagner, 1982, *Wiedemannia (Philolutra) fallaciosa* (Loew, 1873), *W. (Ph.) wachtli* (Mik, 1880), and *Wiedemannia (Eucelidia) zetterstedti* (Fallen, 1826).

Wiedemannia (Philolutra) kacanskae sp.n. is described and figured.

The presence of the species is shown in the 50 km UTM grid of Bosnia and Herzegovina.

POVZETEK

Članek obravnava 186 novih podatkov in 40 podatkov iz literature (STROBL 1900, BEZZI 1904, ENGEL 1940, WAGNER 1981, 1985, pers. com., HORVAT 1990) o 35 vrstah vodnih muh Empididae (Diptera) v Bosni in Hercegovini. Obravnavane vodne muhe poplesovalke pripadajo dvema poddržinama (Clinocerinae, Hemerodromiinae) in 8 rodovom: *Clinocera* (7 vrst), *Dolichocephala* (2), *Wiedemannia* (15), *Chelifera* (5), *Chelipoda* (2), *Heleodromia* (2), *Hemerodromia* (1) in *Phyllodromia* (1 vrsta).

Dvanajst vrst je novih za favno vodnih Empididae v Bosni in Hercegovini: *Clinocera (Clinocera) schremmeri* (Vaillant, 1964), *Clinocera (Hydrodromia) wesmaeli* (Macquart, 1835), *Clinocera (Kowarzia) plectrum* Mik, 1880, *C. (K.) tenella* (Wahlberg, 1844), *Wiedemannia (Wiedemannia) andreevi* Joost, 1982, *W. (W.) braueri* (Mik, 1880), *Wiedemannia (Chamaedipsia) aequilobata* Mandaron, 1964, *W. (Ch.) beckeri* (Mik, 1889), *W. (Ch.) thienemanni* Wagner, 1982, *Wiedemannia (Philolutra) fallaciosa* (Loew, 1873), *W. (Ph.) wachtli* (Mik, 1880) in *Wiedemannia (Eucelidia) zetterstedti* (Fallen, 1826).

Opisana in ilustrirana je *Wiedemannia (Philolutra) kacanskae* sp.n.

Prisotnost vrst je prikazana na UTM mreži (50 × 50 km) Bosne in Hercegovine.

Priporočila sodelavcem za pripravo rokopisa

1. Revija Scopolia je glasilo Prirodoslovnega muzeja Slovenije. Objavlja originalne prispevke, vezane na dejavnost muzeja, ki obravnavajo problematiko s področij botanike, zoologije, geologije, paleontologije in muzeologije.
2. Obseg prispevkov praviloma ni omejen.
3. Rokopis naj bo čim bolj zgoščen, pisan v slovenščini, angleščini ali nemščini.
4. Prispevki naj bodo na eni strani lista velikosti A4, z dvojnim razmikom med vrsticami (30 vrstic) in z najmanj 4 cm širokimi robovi. Odstavki naj bodo označeni z umikom. Izpisi morajo biti ustrezne kvalitete (nov trak). Vse gradivo oddajte v dveh izvodih (original in kopijo).
5. Prispevke po možnosti pripravite in oddajte tudi na disketi (3 1/2" ali 5 1/4") kot ASCII datoteke. Besedila na disketi ne smejo imeti deljenih besed.
6. Naslov prispevkov naj bo čim krajišč in zgoščen. Poleg imena in priimka avtorja naj bo v jeziku, kot je napisan prispevek, naveden tudi točen naslov ustanove, kjer dela ali naslov stanovanja.
7. Navedene naj bodo ključne besede (key words).
8. Izvlečka, z največ 300 znaki, naj bosta napisana v slovenščini in angleščini.
9. Obsežnejši prispevki naj imajo na začetku na posebnem listu napisano stvarno kazalo.
10. Povzetek naj bo zgoščen, napisan v angleščini ali nemščini, če je original v slovenščini in obratno. Priloženo naj bo tudi besedilo povzetka v slovenščini.
11. Pri pripravi rokopisa in načina citiranja literature, naj se avtorji zgledujejo po zadnji številki revije Scopolia. Vse številke v citirani literaturi naj bodo arabske.
12. Imena rodov in nižjih kategorij naj avtor dosledno podčrta z valovito črto, ostale oznake opravi uredništvo.
13. V objavo sprejemamo črno-bele fotografije, ki naj bodo narejene na gladkem papirju in primerno kontrastne. Vse risbe naj bodo narejene s tušem ali tehniko, ki je enake kvaliteti (letraset, laser itd.). Pri dimenzijah fotografij in risb naj avtorji upoštevajo primerno pomanjšanje na format revije. Barvno gradivo (risbe, diapositive) objavljamo na stroške avtorja.
14. V tiskarni postavljajo le manj zahtevne tabele. Zato bolj zahtevne tabele pripravi avtor tako, da jih je možno neposredno reproducirati. Natipkane naj bodo jasno, brez popravkov, s kakovostnim pisalnim strojem ali tiskalnikom.
15. Fotografije, slike in tabele morajo biti primerno oštevilčene in na robu opremljene z imenom avtorja in naslovom prispevka. Po potrebi naj bo označen njihov položaj.
16. Podpisi naj bodo na posebnem listu, napisani v slovenščini in v tujem jeziku, v katerem je napisan prispevek oziroma njegov povzetek.
17. Vsi prispevki so strokovno recenzirani.
18. Prve korekturre teksta opravi avtor prispevka, naslednje pa le na svojo željo. Ob prvih korekturah avtor označi na robu besedila približno mesto slik in tabel.
19. Prispevkov ne honoriramo, avtor prejme brezplačno 50 izvodov revije, večje število lahko avtor naroči posebej pri uredništvu.
